FOR MANUFACTURERS WHO BUILD TO ORDER

Move customer requests from quote to shop floor.

AI-assisted workflows. Human review.

WorkBenches helps connect requirements, estimating, engineering and production preparation around the way your team works.

THE WORK, CONNECTED

A clear output at every handoff.

01 Requirements

Organize customer PDFs, specifications and field notes. Keep source references and unresolved questions visible.

Reviewed by your project lead

02 Quoting

Prepare quantities and a preliminary quote using the product and costing rules your team defines.

Reviewed by your estimator

03 Drawing review

Connect field changes, revisions and required approvals to the job. Drawings and submittals apply where needed.

Reviewed by your engineer

04 Production preparation

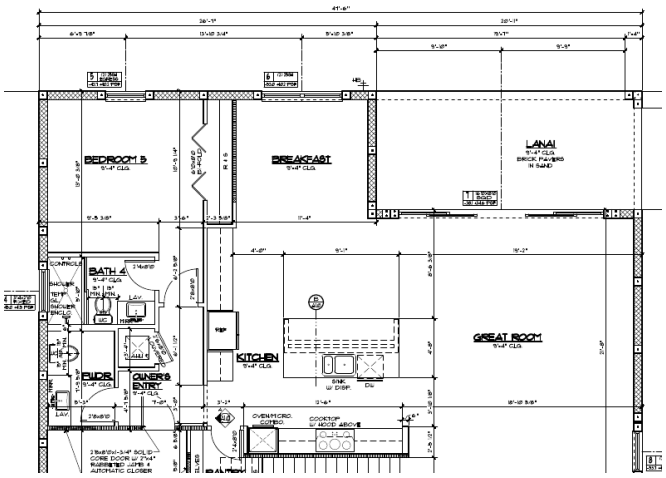

Prepare a production order, material list and release checklist from the reviewed job information.

Reviewed by your production lead

ILLUSTRATIVE WORKFLOW

A change with context.

A source drawing provides the context for requirements, drawing review and production preparation. The workflow described here is illustrative.

DRAWING REFERENCE / ANONYMIZED / NOT A CUSTOMER CASE

Your team owns the decisions.

Estimators approve pricing. Engineers verify technical changes. Production confirms the release. The scope and required formats are agreed for your product family.

Illustrative example only. Not a customer case or fabrication document.

LET'S TALK!

Bring your process. Find the starting point.

Start with the handoff that takes the most manual effort.

01 **Bring a representative job**

A customer request, your working documents and the output the next department needs.

02 **Define a focused scope**

Choose a useful deliverable, required inputs and the people who will review it.

03 **Evaluate with your team**

Agree on representative cases and review criteria before considering a wider scope.
